Clonetics™ aortic smooth muscle cell systems
AoSMC & D-AoSMC

Introduction
Clonetics™ aortic smooth muscle cell systems contain normal human aortic smooth muscle cells (AoSMC) or diseased human aortic smooth muscle cells from diabetic donors (D-AoSMC) and optimized media for their growth. Each system can generate AoSMC or D-AoSMC cultures for experimental applications in vascular pathology, including atherosclerosis and cardiovascular pharmaceutical development. Clonetics™ aortic smooth muscle cell systems are convenient and easy to use, allowing the researcher to focus on results. Cryopreserved AoSMC and D-AoSMC are shipped in third passage. Proliferating AoSMC and D-AoSMC are shipped in fourth or fifth passage.

Clonetics™ cells, medium and reagents are quality tested together and guaranteed to give optimum performance as a complete cell system.

Cell system components
- One aortic smooth muscle cell product (cryopreserved or proliferating).
- Clonetics™ SmGM™-2 BulletKit™ (CC-3182) contains one 500 ml bottle of smooth muscle cell basal medium and the following growth supplements: hEGF, 0.5 ml; insulin, 0.5 ml; hFGF-B, 1 ml; FBS, 25 ml; GA-1000, 0.5 ml.
- One ReagentPack™ (CC-5034) containing:
  - Trypsin/EDTA 100 ml
  - Trypsin neutralizing solution 100 ml
  - HEPES buffered saline solution 100 ml

Characterization of cells
Routine characterization of AoSMC and D-AoSMC includes immunofluorescent staining. These cells stain positive for smooth muscle α-actin and negative for von Willebrand (factor VIII) antigen after differentiation.

Performance
- Recommended seeding density for subculture: 3,500 cells/cm²
- Typical time from subculture to confluent monolayer: 6 - 10 days
- AoSMC additional population doublings guaranteed using Clonetics™ system: 15
- D-AoSMC additional population doublings guaranteed using Clonetics™ system: Tested through 3 passages for information only

Quality control
HIV-1, hepatitis B and hepatitis C are not detected for all donors and/or cell lots. All cells are performance assayed and test negative mycoplasma, bacteria, yeast and fungi. Cell viability, morphology and proliferative capacity are measured after recovery from cryopreservation. Clonetics™ media are formulated for optimal growth of specific types of normal human cells. A certificate of analysis (COA) for each lot of cryopreserved cells is shipped with each order. COA for all other products are available upon request.

Ordering information
Cryopreserved Cells
- CC-2571 AoSMC ≥500,000 cells
- CC-2914 D-AoSMC diabetic type I ≥500,000 cells
- CC-2916 D-AoSMC diabetic type II ≥500,000 cells

Proliferating cells – Flasks and multiwell plates

AoSMC

CC-2671  T-25 flask
CC-0234  T-75 flask
CC-0148  96-well plate

Other proliferating formats are available. Contact Scientific Support or see the Lonza website for details.

CC-3182  SmGM™-2 BulletKit™, SmBM™ plus SingleQuots™ 500 ml of growth supplements
CC-3181  SmBM™, smooth muscle cell basal medium 500 ml
CC-4149  SmGM™-2 SingleQuots™, formulates SmBM™ to SmGM™-2
CC-5034  ReagentPack™
Trypsin neutralizing solution 100 ml
Trypsin/EDTA solution 100 ml
HEPES buffered saline solution 100 ml

When placing an order or for technical service, please refer to the product numbers and descriptions listed above. For a complete listing of all Clonetics™ products, refer to the Lonza website or the current Lonza catalog. To obtain a catalog, additional information or technical service you may contact Lonza by web, e-mail, telephone, fax or mail.

Product warranty

CULTURES HAVE A FINITE LIFESPAN IN VITRO. Lonza guarantees the performance of its cells only if Clonetics™ media and reagents are used exclusively, and the recommend protocols are followed. The performance of cells is not guaranteed if any modifications are made to the complete cell system. Cryopreserved AoSMC and D-AoSMC are assured to be viable and functional when thawed and maintained properly.

THESE PRODUCTS ARE FOR RESEARCH USE ONLY. Not approved for human or veterinary use, for application to humans or animals, or for use in clinical or in vitro procedures.

WARNING: CLONETICS™ AND POIETICS™ PRODUCTS CONTAIN HUMAN SOURCE MATERIAL, TREAT AS POTENTIALLY INFECTIOUS. Each donor is tested and found non-reactive by an FDA approved method for the presence of HIV-1, hepatitis B virus and hepatitis C virus. Where donor testing is not possible, cell products are tested for the presence of viral nucleic acid from HIV, hepatitis B virus, and hepatitis C virus. Testing can not offer complete assurance that HIV-1, hepatitis B
